Detroit Public Schools Changes on MI School Data

The Detroit City School District (district code 82010) has been eliminated as an operational district for purposes of educating students and was replaced by Detroit Public Schools Community District (district code 82015). The “old” district will remain intact for resolution of historical debt. Please read the details below to understand how this will impact reports and data files on www.mischooldata.org:

- For financial reports, Detroit City School District will remain, and Detroit Public Schools Community District will not appear as an option in the location setting menus for school year 2015-16 and prior. In subsequent years, Detroit Public Schools Community District will appear in the location settings for financial reports, and Detroit City School District will also appear as long as data is submitted. The financial history and debt of the “old” Detroit district will be reflected in the Detroit City School District reports, and Detroit Public Schools Community District will contain financial information for the “new” district beginning with SY 2016-17.
- For all other reports, Detroit Public Schools Community District has replaced Detroit City School District in the location settings for all available school years. Data previously associated with Detroit City School District will now appear under the history of Detroit Public Schools Community District, and past years’ data will appear unbroken in the charts when using trend report functionality.
- Historical MS-Excel files under the Additional K-12 Data Files section of the site will remain as is with Detroit City School District appearing in SY 2015-16 files and prior. Files produced after this school year will replace the old district name and code with the Detroit Public Schools Community District name and code— except the financial files where both districts will appear when applicable.
